

WHAT IS CLAIMED IS:

1. A clamping tool of chain ends of an accessory in which a holder provided at one end of a chain portion of the accessory is engaged with a holder receiver provided at the other end of the chain portion to be interlocked with each other, wherein

the holder and the holder receiver are respectively provided as attracting members with magnets attracting each other or with a magnet and a metal material attracted by the magnet at positions capable of guiding the holder and the holder receiver to a proper engaging location.

2. The clamping tool of chain ends of an accessory according to Claim 1, wherein the holder is a spring-close type alligator clip in which a pair of jaw members is rotatably held so as to be able to be opened and closed and the holder receiver is an interlocking member fitted in between the pair of opening jaw members to be interlocked.

3. The clamping tool of chain ends of an accessory according to Claim 2, wherein one attracting member is provided in the alligator clip and the other attracting member is provided at a tip of the interlocking member.

4. The clamping tool of chain ends of an accessory according to Claim 3, wherein an attracting member provided in the alligator clip is fixed to any one of the pair of jaw members or a holding member for holding the attracting member

is held on a holding shaft for rotatably holding the pair of jaw members.

5. The clamping tool of chain ends of an accessory according to Claim 3, wherein an attracting member provided in the alligator clip or a holding member for holding the attracting member is connected to the pair of jaw members by means of a linking arm to form a link mechanism in which the attracting member operates to project from an opening in opening the pair of jaw members.

6. The clamping tool of chain ends of an accessory according to Claim 5, wherein the linking arm of the link mechanism is a spring for closing the alligator clip.
